Space Phoenix Systems Introduces Nostimere to Unlock New Commercial Markets for Space Logistics

Dedicated market development division will connect the world's leading luxury brands with space, creating new revenue opportunities as the orbital economy matures.

BALTIMORE, MARYLAND — November 23, 2026 — Space Phoenix Systems, Inc. (SPS), a Baltimore-based company pioneering reusable, round-trip space logistics, announced the introduction of Nostimere - *The House of Return* - a dedicated, market-development division focused on connecting the global luxury goods industry with the extraordinary commercial and branding opportunities inherent in space.
Nostimere represents a strategic extension of SPS's core business, designed to unlock new sources of commercial demand for its reusable spacecraft and return logistics capabilities. By enabling prestigious global brands to send products and other assets into space and return them safely to Earth, Nostimere will create opportunities for exclusive collections, premium brand experiences, and entirely new categories of space-enabled luxury goods.

The SPS initiative also reflects a practical commercial strategy. While the emerging markets for microgravity research, advanced manufacturing, and other orbital applications continue to develop, the global luxury industry offers an established customer base with the resources, creativity, appetite for differentiation, and willingness to quickly capitalize on the unique value of spaceflight.

"Our mission has always been to make round-trip access to space more affordable, reliable, and commercially accessible," said Andrew Parlock, Chief Executive Officer of Space Phoenix Systems. "Nostimere allows us to introduce that capability to an entirely new customer segment without diverting resources or attention from our core space logistics business. We see an opportunity to develop nearer-term commercial revenue, build demand for our missions, and demonstrate the value of returnable space transportation while the broader orbital economy continues to mature."

Creating Value Beyond Transportation

The appeal of spaceflight extends well beyond its technical and scientific applications. For luxury brands, the opportunity to associate a product with an authentic journey into space introduces a powerful new dimension of exclusivity, provenance, innovation, and storytelling.

Through Nostimere, participating companies will be able to explore limited-edition products, exclusive branding rights, special collections, and customer experiences built around the extraordinary distinction of having traveled into space and returned to Earth.

Unlike conventional space-themed merchandise, these products will have a documented connection to an actual orbital mission. Participating products will be tracked and recorded throughout their journey and, following their return, accompanied by a Certificate of Return and archived mission documentation verifying their spaceflight history.

"Luxury has always been about creating something extraordinary - something that cannot easily be replicated," said Beth Dean-Pope, who leads Nostimere. "Space introduces an entirely new dimension of rarity,

authenticity, and emotional connection. We are giving the world's most imaginative brands an opportunity to create products and experiences with a story unlike any other: they have actually traveled beyond Earth and returned. Nostimere will translate that extraordinary journey into meaningful commercial and brand value."

A Complementary Market for SPS's Core Capabilities

SPS is developing reusable spacecraft and supporting infrastructure to address one of the most significant constraints facing the emerging orbital economy: the limited availability of affordable, reliable, and repeatable transportation to space and back.

Its spacecraft fleet is designed to transport commercial payloads to low Earth orbit and safely return them to Earth, supporting a growing range of scientific, industrial, and commercial applications.
Nostimere will leverage this same transportation infrastructure to serve a complementary market. Rather than developing separate spacecraft or pursuing activities outside SPS's core competencies, the division will focus on brand partnerships, commercial market development, mission bookings, licensing opportunities, and the creation of premium customer experiences.

The division is intended to help SPS maximize the commercial potential of its planned missions by introducing additional customers and revenue opportunities alongside its traditional research, manufacturing, and technology-development payloads.

This approach provides SPS with a means of broadening its addressable market, developing earlier commercial relationships, and building demand for its transportation services as the more capital-intensive segments of the orbital economy advance toward large-scale commercialization.

Bringing the Value of Space Back to Earth

Nostimere's proposition is built around a powerful distinction: *the value of a journey into space does not end in orbit. Its greatest commercial value may begin when the product returns to Earth.*

By connecting the global luxury industry with SPS's reusable space logistics capabilities, Nostimere will create new commercial opportunities while reinforcing SPS's commitment to building the transportation infrastructure for the emerging orbital economy.

About Space Phoenix Systems

Space Phoenix Systems (SPS) is a Baltimore-based company pioneering affordable, reliable, and reusable round-trip space logistics. Its spacecraft and supporting infrastructure are being developed to enable the growing markets for microgravity research, advanced manufacturing, and commercial space applications.
